10th SYDNEY INTERNATIONAL ENDOSCOPY SYMPOSIUM
Incorporating the WESTMEAD ENDOSCOPY SYMPOSIUM
NURSES’ WORKSHOP

Wednesday 15, Thursday 16 and Friday 17 March, 2017

TOPICS INCLUDE
- Colonoscopy
- Approach to serrated polyps, serrated dysplasia and neoplasia in 2017
- Best practice polypectomy
- New methods in advanced tissue resection: EMR and ESD
- Enhanced imaging and optical diagnosis
- GI stricture management
- Palliation of malignant luminal obstruction
- ERCP: complex and basic therapeutics
- Direct cholangioscopy
- Balloon enteroscopy
- Treatment of achalasia including POEM
- Endoscopic treatment of perforations and fistulas
- Endoscopic ultrasound
- Barrett’s Oesophagus
  - Detection of inconspicuous neoplasia and dysplasia
  - Endoscopic treatment for dysplasia and early cancer in 2017

SIES INTERNATIONAL FACULTY
- Prof Helmut Neumann, Germany
- Prof Thierry Ponchon, France
- Prof Doug Rex, USA

AUSTRALIAN FACULTY
- Prof Emad El-Omar
- A/Prof Luke Hourigan
- Dr Brad Kendall
- Prof Raj Singh
- A/Prof Andrew Taylor
- Dr David Williams

ALL PROCEEDS DONATED TO
- Prof Helmut Neumann, Germany
- Prof Thierry Ponchon, France
- Prof Doug Rex, USA
- Prof Emad El-Omar
- A/Prof Luke Hourigan
- Dr Brad Kendall
- Prof Raj Singh
- A/Prof Andrew Taylor
- Dr David Williams
- Prof Helmut Neumann, Germany
- Prof Thierry Ponchon, France
- Prof Doug Rex, USA
- Prof Emad El-Omar
- A/Prof Luke Hourigan
- Dr Brad Kendall
- Prof Raj Singh
- A/Prof Andrew Taylor
- Dr David Williams

THIS COURSE IS ENDORSED BY
- THE AMERICAN SOCIETY FOR GASTROINTESTINAL ENDOSCOPY
SIES 2017 APP

Download the official smartphone app for SIES 2017!

Kindly brought to you by Olympus.

Available to you at no cost as a SIES delegate, our APP puts the event in the palm of your hand! (You will be given a login once registered)

You can use the app to plan your time in advance via the web portal, decide what you want to see and do, and then use one of the smartphone apps (available for iPhone, Android and mobile web) to:

- Have the conference program and floorplan in the palm of your hand and personalise your schedule
- See profiles of all exhibitors and their staff and have access to additional documents etc
- Capture exhibitor information straight to your phone by scanning QR codes at the show
- Keep up with real time alerts, news and tweets during the show
- ‘Favourite’ things you like – people, documents, promotions, stands, to review later at your leisure and share with others
- Exchange contact details with other attendees and exhibitors
- Find the people you’re looking for and send meeting requests
- Rate conference sessions… participate in live polling and much more!

You will be given instructions on how to login and invited to set up your password once registered. Mobile web app: showgizmo.mobi

If you have allowed ‘show app profile’ at registration, you will be able to go to your profile and update it, view other profiles, look at the most up-to-date information and much more.

Log on to the Hyatt’s WiFi:
SydneyEndoscopy2017
WiFi Access Code: sies2017

NEW Q&A FEATURE!
Ask questions in-session on the fly. Questions are moderated by the speaker/chair and can be answered by the panel or passed on to the Endoscopists at Westmead.

WIN!

EACH DAY WE WILL AWARD A PRIZE FOR THE MOST FREQUENT PARTICIPANT IN THE APP.

Conditions: Simply use your SIES App (to ask questions, share information, make comments and more) to go into the draw to win a $250 eftpos card!

Dear Colleagues and Friends,

On behalf of our department, it is my great pleasure to extend to you our sincere gratitude and to welcome you at this momentous time for the 10th annual Sydney International Endoscopy Symposium. We will again aim to provide a comprehensive demonstration of diagnostic and therapeutic endoscopy. Your support and enthusiasm has been overwhelming and this year will be our largest and I believe our most successful event yet.

The Symposium’s content has been carefully designed to facilitate discussion. Please utilise the Symposium App via your mobile device to relay your questions through the chairs to our proceduralists. This is a unique feature that will enhance the interaction between the expert faculty and the audience. A strong emphasis on the cognitive processes behind the delivery of high quality endoscopy will feature. Several novel technologies will also be demonstrated.

On behalf of our Department, Nurses and Doctors alike, I thank you for your support and for interrupting your busy schedules to join us here for these three special days. I believe the international guests, in combination with our Australian faculty and the team from Westmead, will provide an enlightening and informative educational experience for you.

This last decade has gone by so swiftly, many of you have attended every meeting, and without your support this important educational event would not be possible, so to all of you we extend our heartfelt appreciation on this very special occasion.

Yours sincerely

Michael Bourke
Chairman Sydney International Endoscopy Symposium 2017
Director of Gastrointestinal Endoscopy,
Westmead Hospital, Sydney

WELCOME TO NURSES

It is a great pleasure to welcome you to the 10th annual Westmead Endoscopy Symposium Nurses’ Workshop.

The Westmead Endoscopy team has prepared another fabulous and stimulating array of talks and demonstrations which will enhance your understanding of Gastrointestinal Endoscopy. There are very interesting topics in the agenda from a large and diverse group of fantastic and awesome speakers on our programme including our 2017 international speaker Jonard Co from the Philippines.

As professional nurses we are always seeking to increase and improve our skills, knowledge and competence and this Nurses’ Workshop offers just that from the hands of expert nurses and doctors handling the various endoscopy devices during the popular demonstration stations. There will be lots of hands-on opportunities to try the common devices and also the latest ones on the market.

The Nurses’ Workshop is also an avenue for networking and interaction amongst the great nursing minds in gastroenterology and endoscopy, offering updates and sharing and learning fresh tips and tricks to promote the specialisation in this specialty.

All nurses are encouraged to attend the following two full days live high quality transmission from the Westmead Endoscopy Suite to the Hyatt Regency Hotel, which will showcase the latest development with interesting and challenging cases, which demonstrate the skills and wisdom of the internationally renowned guest faculty.

CPD points will be available for nurses attending the Workshop and Symposium.

Yours sincerely

Mary Bong
Nurse Unit Manager Endoscopy Unit,
Westmead Hospital Organising Committee,
Sydney International Endoscopy Symposium, Nurses’ Workshop 2017
Dr Doug Rex is Distinguished Professor of Medicine at Indiana University School of Medicine, Chancellor’s Professor at Indiana University Purdue University Indiana, and Director of Endoscopy at Indiana University Hospital in Indianapolis. He graduated from Harvard College, Summa Cum Laude in 1976 and with highest distinction from Indiana University School of Medicine in 1980. He served as Chief Medical Resident at Indiana University Hospital and joined the faculty at Indiana University in 1985. He received the Outstanding Teacher Award in the Introduction to Medicine course five times and has been awarded the Indiana University School of Medicine Outstanding Teacher Award as well as Department of Medicine’s Excellence in Teaching Award. He is a full-time clinical gastroenterologist at Indiana University Hospital.

His major research interests have been in colorectal disease and, in particular, colorectal cancer screening and the technical performance of colonoscopy. He co-authored the colorectal cancer screening recommendations of the American College of Gastroenterology and the US Multi-Society Task Force on Colorectal Cancer. He also authored the recommendations on quality in colonoscopy of the US Multi-Society Task Force on Colorectal Cancer and the American College of Gastroenterology/ American Society of Gastrointestinal Endoscopy.

Dr Neumann is Professor of Medicine and director of endoscopy at the Department of Internal Medicine at the University Medical Center Mainz in Germany. He is actively involved in basic and clinical research in the areas of advanced endoscopic imaging. His main research focus is inflammatory bowel disease, infectious colitis, colon polyps and Barrett’s esophagus. Dr Neumann has received a number of awards for clinical excellence and acts as a reviewer for various journals including Nature, The Lancet, Gastroenterology, Gastrointestinal Endoscopy and Endoscopy. Dr Neumann acts as Associate Editor for Digestive Endoscopy and Digestive and Liver Disease and as Editorial Board Member of Endoscopy, United European Journal and The Video Journal and Encyclopedia of GI Endoscopy. He has also been assigned as a member of the ASGE International Committee and a Fellow of the American Society for Gastrointestinal Endoscopy.

His contribution to the field of endoscopy is officially recognized by the American Society for Gastrointestinal Endoscopy (ASGE) and the European Society of Gastrointestinal Endoscopy (ESGE).

Dr Neumann has published over 160 articles in the field of advanced endoscopic imaging and on new and emerging endoscopic devices. His scientific research was published in high-rated journals, including Nature, Lancet Oncology, Nature Medicine, Gastroenterology, Gastrointestinal Endoscopy and Endoscopy. Besides, he holds multiple patents on advanced endoscopic imaging techniques.

Professor Thierry Ponchon is Head of the Digestive Diseases Department at the E.Herriot Hospital, Lyon, France. He is a world renowned clinician, endoscopist and researcher and is the current President of the European Society of Gastrointestinal Endoscopy. He is the founding Editor-in-Chief of Endoscopy International Open journal. He has contributed over 200 publications in esteemed peer-reviewed journals. We look forward to his expert contribution to this 10th anniversary SIES meeting.

The attendance of the international faculty has been graciously supported by our Platinum Sponsors.
The future in your hands

Resolution 360™ Clip

Take Control

The Resolution 360™ Clip’s innovative and unique design enables precise control and 1:1 rotation in either direction for more accurate clip placement and increased procedural efficiency.
Simplify your hemostasis procedures.

There is no one solution for GI bleeds. That’s the idea behind Cook’s growing family of endoscopic hemostats, all designed to simplify your hemostasis procedures. Now we offer you the exciting new modality created by Hemospray for nonvariceal upper GI bleeds and the intuitive control and precision of the Instinct Endoscopic Hemoclip—two new simple solutions to solve complex problems.

Cook Medical—Simplifying hemostasis.

### SYMPOSIUM RECEPTION

**Venue:** Sydney Opera House, ‘Opera Point Marquee’

**Date:** Thursday 16 March, 7:00pm – 9:00pm

**Cost:** $85 per delegate

**Inclusions:** Fine food and drinks for 2 hours

**Welcome aboard HMAS SIES!**

Boarding from 6:15pm for a sharp departure time of 6:25pm.

Cruise the world famous Sydney Harbour as we make our way towards the iconic Sydney Opera House.

HMAS SIES will depart from the Sydney Aquarium Wharf (a short stroll down from the Hyatt Regency). A walking group is leaving the Hotel foyer at 6:00pm sharp.

Located on the picturesque Sydney Harbour foreshore, the Opera Point Marquee offers a magnificent vantage point to enjoy one of the world’s most famous views.

Homemade preparations based on PEG 3350 have comparable effectiveness to commercial preparations. However, they may not be best for patients at high risk of failure, whether because of bowel constipation or other factors. Additional oral or enema preparations may be needed for these patients. Continued uncertainties exist regarding the optimal bowel preparation methods.

Assessing the effluent on the day of the procedure is important, as it can indicate the adequacy of bowel preparation. Scores of 2 or higher in each segment of the colon are recommended by the preferred validated scale. This forces assessment after intraprocedural cleansing. Scores of 2 or higher in each segment have been validated as indicating adequate preparation. Assessment should be followed by use of procedure-appropriate screening and surveillance intervals.

Detecting colon polyps is critical for reducing the incidence of colorectal cancer. Colonoscopy can reduce the risk of colorectal cancer, and it is the most effective screening method for detecting adenomas. However, the adenoma detection rate (ADR) is the principal measure of the quality of colonoscopy. Adequate rates of bowel preparation are important, as they can improve detection. The key elements of effective detection are simply carefully looking behind folds, and effective intraprocedural cleansing and distention.

The adenoma detection rate is the principal measure of the quality of colorectal cancer. Adequate rates of bowel preparation are important, as they can improve detection. Whether confining ADR to screening patients is necessary, and whether adenomas per colonoscopy (APC) would increase cost in clinical practice. The degree to which APC correlates with cancer prevention is uncertain. Public transparency of ADR seems desirable, but acceptance by endoscopists is uncertain. Widespread video recording of colonoscopy would likely improve detection, but its feasibility and acceptance remain uncertain. Important technical issues that are unresolved include whether adjunctive devices help low-level or high-level detectors or both, and at what point ADR improvements no longer produce gains in cancer prevention. Whether detection can be automated by computer assistance is a central technical issue.

In surveillance, separation of patients into low and high-risk adenoma findings has been the central theme. Whether the low-risk group can be extended, particularly for high-level detectors, and whether surveillance intervals generally can be linked to baseline ADRs, are important issues for improving cost-effectiveness. The possibility of establishing lifelong protection from cancer based on 1 or 2 normal colonoscopies by a high-level detector seems increasingly feasible.

Colon polyps: Not Missing, Not Misinterpreting

The priority quality indicators for colonoscopy are the adenoma detection rate (ADR), the cecal intubation rate, and screening and surveillance intervals. Adequate rates of bowel preparation are likely to emerge as a fourth quality priority indicator. Of these, ADR is the most important, and is a validated predictor of cancer prevention. Master level detection during screening colonoscopy is an ADR the range of 45% to 50%. There are proven gains in cancer protection up to ADRs of about 35%. There should be some discomfort with any ADR below 35%, and consideration of steps to improve ADRs below that range.
Very high level detectors are able to achieve their detection rates using their knowledge of disease spectrum (endoscopic appearances of flat and serrated lesions) and then good fundamental technique, which includes looking carefully on the proximal sides of folds and flexures, cleaning up debris, and adequate colonic distention.

Improvements in detection can be classified as 1) non-device tools such as right colon double examination, and patient rotation during withdrawal 2) scope-based methods, which include FUSE, G-Eye, Third Eye Panoramic, and the electronic chromoendoscopy tools, and 3) add-ons such as chromoendoscopy, and mucosal exposure devices that are applied to the instrument tip including EndoVision, Amplifeye, and EndoRings.

Randomized controlled trials on the impact of position change have been mixed, and position change to improve colonic distention is primarily feasible in patients in moderate or minimal sedation. Double examination is effective, but a second examination of the right colon in the forward view is as effective as an examination in retroflexion. Retroflexion is easiest to perform when the right colon is straight, has adequate luminal caliber, and when there is no loop in the insertion tube. When those features are absent, indications for a second right colon examination include a high predicted prevalence of disease based on indication (e.g. bleeding indications), or the finding of polyps on the first forward examination.

Results with the FUSE device have been mixed. The resolution of the FUSE scope, while recently improved, is still inferior to some standard traditional forward-viewing scopes. All of the add-on scope devices including G-Eye, EndoRings and Endocuff have produced detection gains in both tandem studies and straight randomized controlled trials. The Third Eye Panoramic device has not yet been adequately tested.

The advantages of accurate endoscopic prediction of histology are several, including prediction of deep submucosal invasive cancer, which should lead to the surgical therapy rather than attempts at endoscopic resection) and prediction of serrated histology (which usually should predict a low threshold for contrast injection and EMR, and relative ease of EMR performance). Predictions of histology in combination with Paris class, including flat or depressed features, and the distinction between granular and non-granular lateral spreading tumors, and granular lesions with mixed features, can also guide endoscopic therapy.

Golo Ahlenstiel, Gastroenterologist and Hepatologist, Westmead Hospital Sydney

The rising prevalence of chronic liver disease in Australia results in increasing burden of patients presenting with liver cirrhosis and associated portal hypertension.

With the recent publication of the new practice guidelines by AASLD for portal hypertensive bleeding in liver cirrhosis it is timely to review currently available treatment strategies, especially with respect to endoscopic intervention. This presentation will focus on state of the art management of portal hypertension, common pitfalls and related complications such as hepatic encephalopathy.

FRIDAY 17th March

Chronic Colitis and Colorectal Cancer – Evaluating and Minimizing the Risk
Helmut Neumann, MD, PhD, FASGE, University Medical Center Mainz, Germany

Gastrointestinal endoscopy is of paramount importance for diagnosis, monitoring and surveillance of dysplasia in patients with both, Crohn’s disease and Ulcerative colitis. Moreover, with the recent recognition that mucosal healing is directly linked to the clinical outcome of IBD patients, a growing demand exists for the precise, timely and detailed endoscopic assessment of the superficial mucosal layer. Further, the novel field of molecular imaging has tremendously expanded the clinical utility and applications of modern endoscopy, now encompassing not only diagnosis, surveillance, and treatment but also the prediction of individual therapeutic responses.

This lecture describes how novel endoscopic approaches and advanced endoscopic imaging methods now allow for the precise and ultrastructural assessment of mucosal inflammation and the potential of these techniques for dysplasia detection and surveillance. Moreover, the latest SCENIC statement on management of dysplasia in IBD will be discussed.
Did you enjoy this year’s Sydney International Endoscopy Symposium so much that you would like to view all presentations and live cases again? Be on standby to receive your complimentary* registration link (next week** post Symposium).

* SIES Access is complimentary for all registered delegates. For delegates who did not attend this year’s SIES then a fee of $100 applies

** The SIES Access team are aiming to distribute the registration link by 24 March, 2017, this is subject to change.

MARK YOUR DIARY!

**Colonic Polypectomy Workshop**

**Friday 8th September, 2017**

*Best practice polypectomy 2017: What every Colonoscopist should know and do*

Venue: Westmead Hospital
Time: 0900 – 1700
Faculty: Cameron Bell, David Hewett, Eric Lee, Nick Burgess and Michael Bourke

KINDLY BROUGHT TO YOU BY

SIES ACCESS

2017
On the occasion of the 10th anniversary of the Sydney International Endoscopy Symposium we would like to honour the Advanced Endoscopy Fellows who have worked at Westmead over the last 20 years.

All of these wonderful individuals have been a huge part of the clinical and academic success of the endoscopy unit at Westmead. Many have played crucial roles in the delivery of the symposium and its continued success over the last decade.

All of us at Westmead deeply appreciate your past and ongoing support as friends, colleagues and academic co-workers. To all of you, on behalf of all of us we extend a heartfelt thank you!

**DAVID ABI-HANNA 1997**
The memories are fading, but I clearly remember the NUM (Allison Trotter I believe) giving us a cup of coffee on arrival on day 1 and then ‘handing’ us to SJW with the words “They’re watered and ready.” I also had renal colic that year and had to have a cystoscopy and removal of a ureteric stone. I still blame this on hours in a lead gown with no time to hydrate (although the banana smoothies and macadamia nuts were nice!)

**ADAM BAILEY 2006**
EYT in his first year was learning to do PEGs with SJW and in a slightly nervous state does a rather generous cut with the scalpel. Soon after the blood started to flow SJW offers EYT some helpful fine tuning advice… “Eric, it’s not a laparotomy!”

Also EYT was often hunched over learning colonoscopy... SJW: “It’s not a scrum!”

**AYAZ CHOWDHURY 1998**
“Olden Days”

**SINA ALEXANDER 2007**
I recall Steve telling me early on in my training: “You are a Collingwood supporter? - if we knew that, we wouldn’t have given you the job”

**MILAN BASSAN 2011**
One of Michael’s that I still hear in my head with worrying regularity: “Photo” *endoscopy image captured*
“Nah, s@#t photo, take another one”

**ADRIAN CHUNG 2010**
“Let me take that... I’ll have a crack at it” (MB)
“She could give someone a tracheostomy with those heels” (Scott Fanning on Vu Kwan)

**JONARD CO 2007-2008**
“It’s great to be back after 10 years apart from Westmead!”

**HALIM AWADIE 2016 - PRESENT**
MB: “photo, photo, photo...mmmm not bad”

**NICK BURGESS 2014-2015**
Michael Bourke (walks into the room and waves arms) “Finish! Finish! Finish!”
Octavio Ferrer (RN) “Nice bites doc..”
Octavio Ferrer (RN) (after patient becomes adequately sedated) “He’s in Fiji now Doc”

**NIC DE LUCA 2000**
“Please get me a low fat yoghurt banana smoothie” by MB was said every thursday during the all day ERCP list. It became low fat as we both started put on weight with the full fat!

“Nearly done, Mary!”

“Nearly done, Mary!”
My favourite saying, obviously from Prof MB - “We need that Oomph!” - this will in the context when we sit down with Prof for abstract submissions to DDW/AGW.

VJ: “Michael here is your coffee” Vanoo looks puzzled as Prof Bourke plunges the tip of his ball point pen into the cap of his X-Large coffee cup on a typical Tuesday morning MB: “Do everything you can to increase flow!”

Quote from Peter Gillespie “Arthur, what do you know about the low GI diet?” He went on to lose several kgs

After a few failed cannulation attempts, on a naive papilla MB said “I had better have a crack at it” he cannulates within seconds and continued to say “don’t be frustrated, it takes me on average 10 seconds after the fellow fails - really, we did a study on it”.

“Do a quick turn around and we can spend more time on each case” MB

“Photo” MB

“That’s AWESOME!”

MB: have you learned anything about Australian culcha yet? Octavio: just a second doc

While doing ERCP, Ding “The cannula is new and very straight” Bourke “Just like you” Ding “What the?” “The All Blacks have got this one”
When discussing colonoscopy technique, Michael would say “All men are created equal... to the splenic flexure - 50cm!”

Then, my phrases would be “knock it out” and “zip it off”
PS: mmmmmmm is also an MB phrase...

Michael Swan
2008-2009
MB : “Perhaps I should just have a look at this one ...” (as Michael grabs the scope out of the hand of the registrar or fellow)
MB: “Isn’t that such a great image...” as Michael looks at (1) the site of just removed large colon polyp, or (2) multiple CBD stones on a cholangiogram, or (3) the site of large polyp/barrett’s EMR months down the track without any evidence of recurrence.

One unforgettable saying I heard from Michael earlier on during my stint at Westmead was “I learn something new from every colonoscopy I do”. I’m sure that was Michael’s way of making me feel at ease, but I must confess that took a while to sink in, coming from the great MB!

<extreme Aussie twang>
“It’ll / She’ll/ He’ll be all-right…..”
SJW
His untimely passing leaves an enormous loss to his beloved family and friends as well as to his colleagues and patients throughout the health service where he is remembered as an outstanding clinician, clinical leader, mentor and friend.

Rick grew up behind Westmead Hospital and went to School at Marist Brothers opposite the hospital, where he was captain of the football team and Dux of the school. He completed his medical degree at Sydney University with his clinical years being at Westmead Hospital. His advanced training years were spent at Westmead as well as St George Hospitals where he was felt to be one of the best trainees ever at both institutions. He distinguished himself as a member of the junior medical staff at Westmead as President of the RMO’s association as well as countless other selfless contributions to the esprit de corps of the service over many years. He never sought recognition but rather change for the better.

He underwent a fellowship at Middlesex Hospital, London advancing his clinical and research acumen as well as his endoscopic skills especially in ERCP.

From the very beginning as a consultant, Rick was a natural leader and over the next two decades was a driving force in Gastroenterology at Blacktown and Westmead Hospitals as well as the Southern Highlands. More recently, Rick was an inspiration with his vision for patient-centred care, health service reform and seeking to establish an integrated model of care. He was passionate about futility of care and discussing advanced life directives with patients early in their illness.

Rick was totally unassuming, never blowing his own trumpet. His ambition and determination was always to get the best out of himself and encourage others to do the same. He was passionate about rugby league and his beloved Parramatta. Using the football analogy, he believed that if we all played our position in the team to the best of our ability and supported those around us we could achieve great things in medical care – one of his many legacies will be just that.

All who knew him recognised his unfaltering aspirations for empathy, justice and fairness.

His next period was to see him as Head of Gastroenterology and Hepatology Services at Blacktown Hospital, a task that unfortunately he will no longer be able to fulfill.
THANK YOU TO THE WESTMEAD SIES TEAM

Westmead Medical Research Foundation raises funds for health care and research at Westmead. We believe everyone who is sick deserves access to the best possible treatment and care.

To help make this possible, generous donations are directed to state of the art medical equipment, lifesaving research and enhanced services at Westmead Hospital and The Westmead Institute for Medical Research.

Donate today at wmrf.org.au or call 1800 639 037
